Prusik Minding Pulleys

- ✓ These pulleys have sides that are squared-off and are often used in conjunction with Prusiks to create a belay system. This "squaring-off" of the sides helps prevent the Prusiks from being pulled through the pulley.
- ✓ Prusik sizes: Use 8mm Prusiks with 11mm rope and 9mm Prusiks with 12.5mm rope.

Uplift and Micro Haulers

- ✓ Double pulleys with remotely triggered retractable brakes.
- ✓ Ideal upper pulleys for a 4:1 haul system configuration.
- ✓ Progress capture is a cinch! Capture cam also can be locked open for a free running configuration.

Knot-Passing/Highline Carriage Pulleys

- ✓ These pulleys are a necessary part of highline operations and a useful tool.
- ✓ The sheave on these pulleys can be locked (with the included pins) to provide a large curved surface for a smooth multiple wrap tie-off point or, remove the pins for a transition point or redirection.
- ✓ A highline can easily utilize two, often three carriage pulleys.
- ✓ These pulleys are capable of passing knots in 12.5mm rope.

Highline/Zip Line Pulleys

- ✓ The fixed sides and 2 in-line sheaves in these pulleys make them ideal for highlines or zip lines.
- ✓ The twin pulleys on rope (or metal cable/wire rope) give improved stability.
- ✓ The stainless steel sheaves on the P21CAB and P21SPE pulleys enable these pulleys to be used on wire rope.
- ✓ The P21SPE has ball bearing for increased speed.
